

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

out swimming. There are two bridges for the public roads and one railroad bridge. At each of these crossings guards are placed, and no one is permitted to pass unless he can establish the fact that he has not been in the yellow-fever neighborhood. It is possible for one to get across the river by swimming, but very few would ever attempt it, and before they could reach their destination, dodging through the thick undergrowth, the five days would elapse and the danger would have passed. In the lower part of the county the little hamlet of Encinal is located. This is under Doctor Williams's jurisdiction.

There are two dirt roads entering the county here, both of which are strongly guarded. All of the contiguous counties have adopted the same measures that Lasalle has. Along the line of the International Great Northern road are a number of little hamlets, the best of which being a very small affair, peopled mostly—say fully two-thirds—by Mexicans. Each place has established its own quarantine, and positively refuses to permit anyone from the south to come in. No one comes in unless he bears the inevitable health certificate. A great number of the Americans left these towns for their ranches when the fever was first announced. In Cotulla, for instance, fully two-thirds of the white population either took the train for the north or went to the ranches.

On October 5 (this morning), not being able to enter any of the towns between Cotulla and this place, coming from the south, I returned to San Antonio, which is really the key to the situation. If no fever gets here, then there is no danger to the country north or east, providing, of course, that none has been already carried by the exodus from Laredo.

The country south is one of magnificent distances, the ranches being from 5 to 30 miles apart, and each one is a principality unto itself, with its own little shotgun quarantine. There is, of course, a little danger of the disease getting on some of the large ranches near Laredo, from the fact that quite a number of Mexicans come north at this season to pick cotton and some one might slip on a ranch and be hidden by his friends.

I reached San Antonio this afternoon and called on Dr. Berry, the president of the board of health. He reports everything quiet and no rumors of any kind.

Respectfully,

JOHN H. PURNELL,
Acting Assistant Surgeon.

Statistical reports of States and cities of the United States—Yearly and monthly.

GEORGIA—*Augusta*.—Month of September, 1903. Estimated population, 42,441. Total number of deaths, 67—white 27, colored 40—including enteric fever 1, measles 1, and 2 from tuberculosis.

Columbus.—Month of September, 1903. Estimated population, 19,303—white, 10,276; colored, 9,027. Total number of deaths, 28, including 2 from tuberculosis.

Macon.—Month of September, 1903. Estimated population, 28,000—white, 15,000; colored, 13,000. Total number of deaths, 25—white 13, colored 12—including 4 from tuberculosis.

ILLINOIS—*Peoria*.—Month of September, 1903. United States census population of 1900, 56,100. Total number of deaths, 57, including diphtheria 5, enteric fever 1, and 9 from tuberculosis.

Rockford.—Month of September, 1903. Estimated population, 40,000. Total number of deaths, 31, including 3 from tuberculosis.

IOWA—*Des Moines*.—Month ended October 3, 1903. Estimated population, 80,000. Number of deaths, 48; no deaths from contagious diseases.

Dubuque.—Two weeks ended September 26, 1903. Estimated population, 40,000. Total number of deaths, 26. No deaths from contagious diseases.

Ottumwa.—Month of September, 1903. Estimated population, 22,000. Total number of deaths, 11, including 1 from enteric fever.

MARYLAND—*Cumberland*.—Month of September, 1903. Estimated population, 20,000. Total number of deaths, 37, including enteric fever 3, and 1 from tuberculosis.

MASSACHUSETTS—*Newton*.—Month of September, 1903. Estimated population, 37,794. Total number of deaths, 38, including enteric fever 1, and 3 from tuberculosis.
